

BENJAMIN OFURHIE

Lisbon, Portugal | +35192005674 | ofurhieb@yahoo.com | [LinkedIn](#) | [GitHub](#)

PROFILE

Data Operations Specialist at Dealroom.co building Python, SQL and BigQuery pipelines and moving into data engineering. Google Cloud Certified Professional Data Engineer with a background in Medicine and Surgery. Hands-on with ETL, data warehousing, data modeling and data quality across 4 end-to-end pipeline and warehouse projects.

TECHNICAL SKILLS

Languages & Databases: Python, SQL, PostgreSQL, MySQL, BigQuery

Cloud & Platforms: Google Cloud Platform, AWS, Databricks

Tools: Apache Airflow, PySpark, Docker, GitHub Actions

Data Engineering: ETL, Data Warehousing, Data Modeling, Data Validation, Incremental Loads, CI/CD, Unit Testing

Visualization: Power BI, Looker Studio, Tableau

WORK EXPERIENCE

Data Operations Specialist

2024 – Present | Lisbon, Portugal

Dealroom.co

- Automated weekly enrichment of 15–20 Y Combinator companies with Python scripts and GCP.
- Scraped YouTube video data with Python to enrich 20–30 new company accounts weekly against the main datasets.
- Built Python ETL processes and optimized BigQuery SQL that turn raw data into clean, analysis-ready tables for team dashboards and KPI reporting.
- Scheduled automated data workflows using GCP Cloud Scheduler, Cloud Functions and the Google Drive API.
- Built custom data-checking pipelines that run data quality checks automatically and streamline the team's QA workflow.

Data Analyst

2023 | Remote

Meri Skill

- Built ETL workflows in Python (Pandas) and SQL to clean, transform and structure large datasets for analytics.
- Standardized recurring business reports with Power Query and SQL so they were delivered on time.
- Automated data ingestion and transformation with Python scripts, reducing manual processing.

DATA ENGINEERING PROJECTS

YouTube ETL Pipeline

[GitHub Repo](#)

Python · YouTube API · PostgreSQL · Pandas · Docker · GitHub Actions

Pulls 500+ videos from MrBeast's channel through the YouTube API with daily incremental loads and deduplication. Staging and core layers in PostgreSQL, JSON schema validation in Python, and Pandas quality checks with unit tests. Containerized with Docker and shipped through a GitHub Actions CI/CD workflow.

Sales ETL Pipeline

[GitHub Repo](#)

PySpark · Apache Airflow · Docker · Parquet · SQL

Processes 52,700 sales records. A Parquet staging layer separates extract from transform so each stage can be re-run independently, and SQL ON DUPLICATE KEY UPDATE upserts mean reruns never create duplicates. PySpark handles type casting, snake_case column names and derived dates.

Uber ETL Pipeline

[GitHub Repo](#)

Python · Pandas · Apache Airflow · Google Cloud Storage · BigQuery · Docker

Loads about 100k Uber ride rows into Google Cloud Storage and models them into BigQuery tables. Custom Airflow DAGs with retry logic and error handling, Pandas validation of null constraints and schemas, and a containerized Airflow environment.

Data Warehouse / Modeling Project

[GitHub Repo](#)

SQL · Data modeling · Star schema · Data warehousing

Combines 2 source systems (CRM and ERP) into 3 analytics-ready tables (fact_sales, dim_products, dim_customers) across Bronze, Silver and Gold layers, modeled as a star schema with conformed dimensions. SQL uses CTEs, window functions and joins, with controls for duplicates, nulls and schema checks.

EDUCATION & CERTIFICATIONS

Medicine and Surgery (MBBS / MD) – V. N. Karazin Kharkiv National University (2023)

Google Cloud Certified Professional Data Engineer – Google Cloud

Data Engineering Professional Certificate – IBM

Apache Airflow 3 Fundamentals – Astronomer

AWS Certified Cloud Practitioner – AWS
